Acadium announces its Colorado pilot program

On April 9, 2008 in Denver, CO, Acadium proudly announced its first pilot program. The customer is the Colorado Department of Education Migrant Education Program (MEP). MEP is interested in using Acadium's nSyte technology to pilot educational opportunities for the children of migrant workers in Colorado.

The system is ideal for language learning and supporting secondary students in their ability to stay in school. MEP is interested in reducing drop-out rates and providing innovative methods to teach English to preschoolers and other family members. "It holds great promise," said Dr. Barbara Medina, English Language Acquisition Unit Director, Colorado Department of Education.

Acadium announced the pilot customer at its Denver proof-of-concept demonstration at the Cable Center. The nSyte broadcast utilized the Auraria Media Center's TV station and its public access channel.

About Acadium, Inc. – Global Solutions That Revolutionize Distance Learning

Acadium is the **first in the world** to have a patent pending system that revolutionizes distance learning. The Acadium system combines televisions and video-enabled cell phones to create a live classroom for every distance learner. Acadium's technology is designed to capitalize on advancing distance learning technology and benefit from exponential growth by focusing on two opportunistic technologies currently under-addressed – television and cell phones. www.acadium.com
